

ANSHUMAN MOHAPATRA

Cloud Engineer (AWS | Serverless | Infrastructure as Code)

[GitHub](#) | [Email](#) | +91 7978294262 | [Portfolio](#) | [LinkedIn](#)

Cloud Engineer specializing in **scalable serverless systems on AWS**, with hands-on experience building production-grade applications used in real-world scenarios. Strong expertise in AWS Lambda, API Gateway, DynamoDB, and Infrastructure as Code, with a focus on **low-latency, cost-efficient architectures**. Proven ability to design systems that scale from zero to millions of users.

EXPERIENCE

AWS Cloud Engineer Intern (Team Lead) – F13 Technologies – Remote

Sep 2025 – Dec 2025

- Led a team to architect and deploy **production-grade serverless AWS applications**, improving delivery speed by **40%**
- Built secure cloud storage platform using Cognito, S3, API Gateway, and CloudFormation
- Optimized backend systems to achieve **sub-300ms API latency**
- Implemented Infrastructure as Code enabling fully automated deployments
- Ensured scalability, cost efficiency, and high availability across systems

PROJECTS

[LinkForge Pro – Serverless URL Shortener & Analytics Platform](#)

[\[Live Demo\]](#) | [\[Admin Panel\]](#)

*Production-ready serverless platform with real-time analytics and admin dashboard
Lambda, API Gateway, DynamoDB, S3, CloudFormation*

- Built scalable URL shortening system with real-time click tracking
- Developed REST APIs for link creation, redirection, and analytics
- Designed DynamoDB schema for high-throughput and atomic operations
- Implemented fully serverless architecture with automatic scaling
- Automated deployment using CloudFormation

[End-to-End DevSecOps Pipeline: Cloud-Native 3-Tier Deployment](#)

*End-to-end DevSecOps pipeline with CI/CD, security scanning, and Kubernetes deployment
AWS EKS, Terraform, Jenkins, Docker, Kubernetes, Prometheus, Grafana*

- Designed and deployed a 3-tier application (React, Node.js, MySQL) on AWS EKS
- Built CI/CD pipeline using Jenkins with automated build and deployment workflows
- Integrated security scanning using GitLeaks, Trivy, and SonarQube
- Provisioned infrastructure using Terraform with VPC and IAM configurations
- Configured monitoring using Prometheus and Grafana

[Resume Parser & Job Matching System](#)

[\[Live Demo\]](#)

*AI-powered serverless pipeline for automated resume screening and job matching
Lambda, API Gateway, S3, DynamoDB, Textract, Python*

- Built an event-driven serverless pipeline to process resumes and match candidates to jobs
- Integrated AWS Textract achieving **99% extraction accuracy**
- Designed multi-stage workflow using S3 triggers and Lambda functions
- Implemented skill matching engine with real-time scoring and analytics
- Achieved **8–10 sec processing at \$0.01 per resume** with scalable architecture

[Serverless Image Optimization Pipeline](#)

[\[Live Demo\]](#)

Lambda, S3, API Gateway, Python

- Built event-driven image processing pipeline triggered by uploads
- Achieved **90–98% compression** under **6 seconds**
- Implemented secure pre-signed URL access
- Delivered fully functional system within AWS Free Tier

TECHNICAL SKILLS

AWS: EC2, S3, Lambda, API Gateway, DynamoDB, RDS, Cognito, ECS, EKS, Fargate, ALB, Route53, CloudFront, CloudWatch, IAM, VPC, CodePipeline

IaC & DevOps: CloudFormation, Terraform, AWS CDK, Docker, Kubernetes, GitHub Actions, Jenkins

Monitoring: CloudWatch, Prometheus, Grafana, ELK Stack

Networking & Security: VPC, IAM, DNS, SSL/TLS, NAT, cost optimization

Programming: Python, Bash, JavaScript, Java, C++

Core: Serverless & event-driven architecture, CI/CD, Linux, Git, distributed systems

EDUCATION

B.Tech – Computer Science Engineering

ITER, SOA University

2022 – Present
